

## BRIDGING THE GAP BETWEEN CLINICAL ENGINEERING & IT

Attacks on healthcare systems are growing and evolving every day and IoMT devices are becoming an increasingly larger target. Healthcare organizations must find new ways to mitigate the growing risk.

**1 in 5**

Connected Medical Devices Run On Unsupported Operating Systems

**39%**

Of analyzed nurse call systems had critical severity unpatched vulnerabilities

**86%**

Of medication, dispensing systems had unpatched CVEs

When it comes to keeping an organization's resources safe, patients protected, and medical devices secure, we are constantly watching, learning, and improving. At Crothall Healthcare, we are committed to helping you mitigate risk and meet your cybersecurity goals associated with connected medical devices.

**1**

### **INVENTORY**

An inventory of connected devices including network parameters, operating system, software and security.

**2**

### **RISK ASSESSMENT**

Assessing risk factors such as devices running legacy operating systems, devices with FDA or manufacturing recalls, outdated certificates.

**3**

### **COLLABORATION**

Collaborating with the OEM, our Security Operations Center provides patch management and application for OEM valid updates.

**4**

### **MONITORING**

Tracking, monitoring & management of clinical asset vulnerabilities.

**5**

### **CAPITAL PLANNING**

Developing long-term capital replacement plans to ensure that medical equipment is up-to-date and secure.

## BENEFITS OF CROTHALL'S PROGRAM

- ✓ **Improved** patient safety and operational efficiency
- ✓ **Cost-effectiveness** and reduced risk of security breaches
- ✓ **Real-time visibility** into your networked medical devices
- ✓ **Partnership with Asimily**, to provide best-in-class vulnerability management risk monitoring, and security operations expertise
- ✓ **Cybersecurity training** is in association with CompTIA, the world's leading tech association
